DRY BENCH

A dry bench or flat bench is designed to allow for easy cleaning due to its flat design it does not hold or contain liquid.

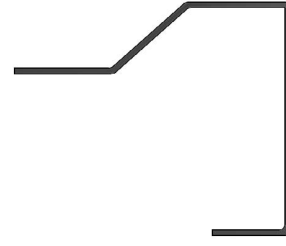

DRY BENCH EXAMPLE

WET BENCH

A wet bench is designed to hold and contain liquids due to its lip. Wet areas are generally found in dishwasher areas in kitchens, and away from power supply.

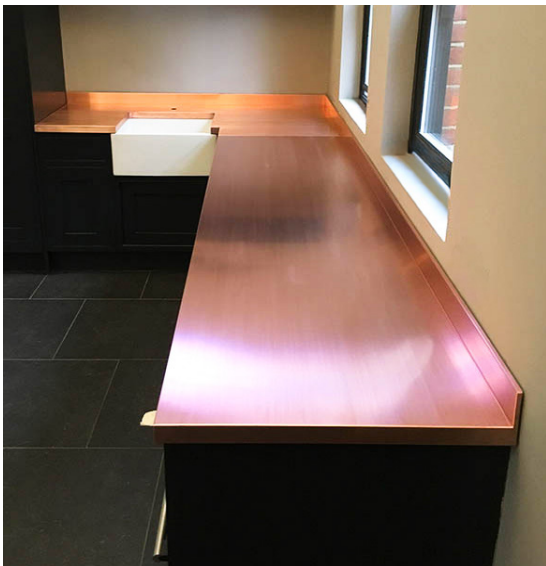

WET BENCH EXAMPLE

SPLASHBACK EXAMPLE

Benches with splash backs help protect walls from splashes and stains, enhancing hygiene while being easy to clean and durable.

WELD IN SINK EXAMPLE

The benefit of a weld in sink is the benchtop runs straight into the sink, making the area exceptionally flat, clean and hygienic and eliminates the need for a visible sink rim which can be difficult to clean.
